## PROPOSALS SOUGHT FOR TELEVISION CREDIT COURSE

The Radio-Television Committee of the General Faculties Council is inviting proposals for an experimental television credit course. With adequate evaluation, the course is intended to show whether it is desirable to introduce more television credit courses at this University.

The course, which must be an integral part of the curriculum and worth full credit towards a degree program, will feature the presentation of material over open and closed circuit television and complementary means of instruction organized around the presentation.

The chief purpose of television credit courses is wider accessibility to students than can be provided by the usual on-campus courses. Some of the side benefits include well-organized presentation of lecture materials for large group instruction;

utilization of the best teacher available for all students; the division of multi-section courses with large enrolments into small groups with person-to-person contact; more individualized learning as a result of instructors and assistants having been freed for more teacher-student contact; an opportunity to review visual materials presented in the lecture; and alleviation of room shortage for large groups.

The proposed experimental course will be a half-year course repeated once to incorporate changes arising from student and instructor feedback. It will be offered as an alternative to a regular course to provide for students' free choice and for a basis for adequate comparison.

Some independent agency such as Administrative Data Processing or Institutional Research and Planning will be involved in the program from planning stages through presentation. The agency will serve as a built-in evaluator and will present information

on which to base any reorganization of the course for the second presentation.

Those making course proposals should try to select courses which lend themselves to television presentation and which have a maximum appeal to potential students. Approval for offering a television credit course should be given by the department organizing the course, the faculty, and the Radio-Television Committee.

The suggested form of the course would be bi-weekly half-hour television programs, regular radio rebroadcasts of audio parts of the program, small group seminars, and regular question periods on radio for discussion of course material between students and instructors. Telephone consultation would be arranged with the instructor or teaching assistants. Videotaped lectures and all other materials would be provided at learning centres on campus; books on the course reading list would be made available at the University and at community centres, schools, and public libraries in outlying centres. Arrangements for home assignments, papers, and examinations would be made by correspondence.

Course content would be the exclusive right and responsibility of the department organizing the program though it is hoped that the presentation would involve feedback from other departments and faculties as well. Technical and professional considerations would be the responsibility of the producer-director, who should be involved as early as possible in the planning stage to advise on the feasibility of certain aspects of the course.

Television credit course proposals should

be submitted to The Radio-Television Department, CW005 Biological Sciences Building. The proposals will be considered by the Radio-Television Committee and priorities set before a final recommendation is made to General Faculties Council.

## SCIENTIFIC CO-OPERATION BETWEEN CANADA AND FRANCE

An agreement on scientific co-operation has been concluded between the National Research Council of Canada (NRC) and France's Centre National de la Recherche Scientifique (CNRS). This agreement will come into effect on June 1, 1971, and will enable laboratories and research groups belonging to or associated with the CNRS and those belonging to NRC or invited as participants by NRC to collaborate on research problems.

The initial programs are expected to be established by the Council and CNRS before June 1. Both NRC and CNRS will make \$30,000 available annually to scientists from the other country, this sum to cover living expenses as specified in the agreement.

Each research program submitted is to detail: the exact nature of the proposed research; the participating research teams; the distribution of work among the participants; the expected cost of the program; and the expected time period for which the co-operation will be needed.

Canadian scientists and organizations interested in proposing a research project in which the CNRS would collaborate should submit their applications, taking into

account the five headings above, to: Secretary for International Relations, National Research Council of Canada, Montreal Road, Ottawa 7, Ontario.

## GENERAL FACULTIES COUNCIL

The regular General Faculties Council meeting held on Monday, April 26, considered the following matters.

### NEW MEMBERS

The following new members were elected to replace outgoing members of Council: F. A. LAUX, Associate Professor of Law; W. ISRAEL, Professor of Mathematics; R. ST.-J. LAMBERT, Professor of Geology; V. B. PROUDFOOT, Professor of Geography; L. I. KENNEDY, Professor of Botany; K. H. GOUGH, Associate Professor of Rehabilitation Medicine; S. PAWLUK, Professor of Soil Science; (MRS.) P. WALLACE, Lecturer in Nursing; J. B. HADDOW, Professor of Mechanical Engineering; R. K. WOOD, Associate Professor of Chemical and Petroleum Engineering. SHIRLEY M. STINSON, Associate Professor of Nursing, will replace RUTH E. MC CLURE, Professor and Director of the School of Nursing, during Miss McClure's sabbatical leave. ZOLTAN MELKVI has been elected for a second term by the Graduate Students' Association.

(The following new members had been elected prior to the General Faculties Council Meeting of March 29): JAMES BELL, Associate Professor of Secondary Education; PETER J. MILLER, Assistant Professor of Educational Foundations; A. S. LITTLE, Professor of Medicine; A. B. CRIGHTON, Associate Professor of Music; G. R. DAVY, Professor and Chairman of Political Science; G. PEACOCK, Professor of Drama; N. YATES, Associate Professor of Art; G. SCHAARSCHMIDT, Associate Professor and Chairman of Slavic Languages; J. FORSTER, Professor and Chairman of Sociology.

### ACQUISITION OF COMPUTER FACILITIES

Proposals were approved setting more explicit terms of reference for the General Faculties Council Computer Facilities and Policy Committee. The changes are intended to provide better co-ordination of the acquisition of computer facilities.

Under the new terms of reference, all purchases or rental of equipment on campus which may be used for remote access to Computing Services or Administrative Data Processing facilities, or to prepare input for or process output from these facilities will be requested from and reviewed by either Computing Services or Administrative Data Processing. The purpose of the review would be to determine if the same degree of service

provided by the equipment could be obtained more economically by other means. In the case of equipment to be purchased with University funds Computing Services or Administrative Data Processing could refer the request to the Committee if more economical means are possible, in which case the onus falls on the computing service concerned to demonstrate the more economical means. The Committee's decision on acquisition of the equipment would be final.

In the case of telecommunications equipment, unit record equipment, and terminals, the order for the equipment would be placed by Computing Services or Administrative Data Processing, who would pay for, and in turn bill for the equipment at full cost. Installation of this equipment would be arranged by Computing Services or Administrative Data Processing in co-operation with the relevant department.

Regarding the rental or purchase of computing equipment on the campus generally, the Committee will be fully informed of all proposed acquisition of computing equipment and associated telecommunication, interface, and data recording and transcription equipment on campus. Proposals for acquisition of such equipment will be forwarded to Computing Services, who in turn will summarize the information for the Committee.

The Committee will have the right to recommend to the central administration that the equipment be purchased, not be purchased or that alternative equipment or services be used. It could make alternate recommendations only if the same degree of service could be provided more economically by other means or if acquisition of the equipment can be shown to be unnecessary or wasteful.

## PEOPLE

■ M. GULUTSAN, Associate Professor of Educational Psychology, has been elected chairman of the Committee on East European and Soviet Studies in the Faculty of Arts for a two-year term.

■ A survey of science education in Czechoslovakia will be the subject of research to be undertaken by WILLARD F. REESE, Associate Professor of Elementary Education. Dr. Reese and IVO MORAVCIK, Associate Professor of Economics, plan to leave for Prague on May 20.

■ H. T. COUTTS, Dean of Education, served as a member of a group of appraisers for a proposed new graduate program of MED and MAT at the University of Western Ontario.

■ THOMAS H. PATCHING, Professor of Mining, and L. R. PLITT, Assistant Professor of Mining and Metallurgy, have been attending the annual general meeting of the Canadian

Children of 12 years of age or under must be accompanied by a parent for swimming.

### SIMULATIONS SYMPOSIUM

A Western Regional Symposium on Instructional Simulations, sponsored by the Universities of Alberta, Brandon, Calgary, Lethbridge and Saskatchewan, will be held May 12 to May 14 on campus. It has been designed for the exchange of theoretical and practical information on the design and utilization of simulation techniques in teaching, and will be of value to university and college faculty, researchers, and administrators who are using or considering using simulations, and to simulation users at the school and community level. JERRY L. FLETCHER, Co-ordinator of Research and Evaluation at John Adams High School in Portland will be the guest speaker. Dr. Fletcher is a recent Harvard graduate and has been extensively involved in research with simulations as a consultant to the game project at Johns Hopkins University Research and Development Centre.

The registration fee is \$30. Participants

will be responsible for their own accommodation, board, and parking. Detailed information is available through the Department of Extension, 439-2021, and registrations are being accepted at Corbett Hall, 82 Avenue and 112 Street.

### COMING EVENTS

■ The Sandin Lecture Series will begin on Monday, May 10 at 11 a.m., when KAREL WIESNER, F.R.S., Professor of Chemistry at the University of New Brunswick in Fredericton, speaks on "The Structure of Ryanodine." Dr. Wiesner's three further lectures, "Some Photochemical Syntheses of Diterpene and Lycopodium Alkaloids," "The Chemistry of Delphinine," and "Some Recent Developments," will be given on May 11, 12, and 13 respectively. All will begin at 11 a.m. in Room V-107 of the Physical Sciences Complex.

■ A Computing Science seminar will be held at 1:30 p.m. on May 12 in Room 315, General Services Building. The MTS Accounting System from the registration and enrolment of a user through to the use of his accounting records internally by the system will be described. A tutorial will follow on the use of "Project Account," a facility which allows project leaders to maintain accounting records of users within a project.
